DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Claims 8-9 and 12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 8 and 9, the claims are vague because the methoxy group is excluded from the R³⁻⁶ groups.

In claim 12, the notations L¹⁻² and P-Sp are not defined. And it is noted that formulae Ia, Ie and If are identical. Also, the formulae Ic and Ig are the same.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 2-11, 15-18, 20-21, 23-24 and 26-31 are rejected under 35 U.S.C. 102(b) as being anticipated by Sinigersky et al. (Macro, Chem. and Phys, 201(11), pages 1134-1140, 2000).

The reference discloses four poly(oxymethyleneanthrylene) were prepared by polycondensation of 9,10-diacetoxyanthracene (and a substituted analog) with α , ω -dibromoalkanes. Two model compounds were also synthesized by the same procedure. Although non-conjugated the polymers could be doped with iodine. The redox reaction of

Art Unit: 1795

doping was confirmed and enhanced electric conductivity. Doping with iodine occurs only when the polymers are in the solid state (see abstract and third paragraph on page 1137). The polymers preparation are shown below and in Table 1, which the reference polymers shown in Table 1 on page 1135 exhibit the electronic properties for segmented polymers such as doping liquid crystal polymer.

$n = 6, 8 \text{ or } 10, \text{ R} = \text{H or } -\text{O}-(\text{CH}_2)_3\text{CH}_3$

with monomers

Art Unit: 1795

The synthesis of polymers is disclosed on page 1140. Therefore, the reference teaching anticipates the claimed invention.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 14, 19 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sinigersky et al. above cited.

The reference differs from the present claims in that the claims are claimed as LC medium, light-emissive material or display device. Because the reference doped polymers are known and useful for these applications in the art, therefore, it would have been obvious to those skilled in the art to utilize the reference polymer to arrive at the claimed invention.

Allowable Subject Matter

6. Claims 13 and 25 are allowed.
